FOREWORD

Praise and gratitude are given to God Almighty, who has bestowed His grace and gifts so that the author can complete the preparation of this 2020 State University Community Service Program report smoothly with less obstacles.

This CSP report was prepared to meet the requirements for the completion of the course, Padang State University Real Work Lecture. The place for KKN is in Koto Panjang Ikua Koto Village, RW.07 Bunga Mas Housing Phase.3, Padang. This report is prepared to provide an overview of how the implementation of KKN is based on data obtained through direct observation and needs analysis. On this occasion I would like to thank those who have helped in the implementation and preparation of the Real Work Lecture Activity (KKN) report including:

1. Prof. Drs. Ganefri, M.Pd, Ph.D, as the rector of the Padang State University.
2. Dr. Elfi Tasrif, MT, As the head of the Padang State University Community Service Program 2020.
3. Rifelino, S.Pd., MT., as the Field Supervisor
4. Bapak Syafril, S.H., as the village head of Koto Panjang Ikua Koto who has supported the program that has been implemented.
5. RW 07 community who also participated in the implementation of CSP.
6. As well as those who have helped from the implementation of KKN to the preparation of this report.

Hopefully all the help given to the author will get the reward from Allah SWT. The author realizes that the writing of this report is far from perfect. The author expects constructive criticism and suggestions for the perfection of writing reports in the future. Hopefully this report is useful for readers in general and for writers in particular.

Padang, July 27 2020

Alif Fatkhur Rojiq

A. INTRODUCTION

1. Background

Covid-19 is a disease caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Covid-19 can cause respiratory system disorders, ranging from mild symptoms such as flu, to lung infections, such as pneumonia. The first case of this disease occurred in the city of Wuhan, China, at the end of December 2019. After that, Covid-19 spread between humans very quickly and spread to dozens of countries, including Indonesia in just a few months. The rapid spread has made several countries implement policies to impose lockdowns to prevent the spread of the Corona virus. In Indonesia, the government implemented a Large-Scale Social Restriction (PSBB) policy to suppress the spread of this virus. However, due to the emergence of other impacts in various aspects, the government is now implementing the New Normal.

Each regional head is trying to prevent the spread of COVID-19 as well as in the Koto Panjang Ikua Koto sub-district, Koto Tengah sub-district, Padang city, West Sumatra. Various efforts and prevention have been carried out by the relevant government agencies to reduce the transmission of COVID-19. The efforts made are spraying disinfectants around people's homes, roads and public places, distributing masks and distributing pamphlets related to how to prevent the corona virus to the community. Despite the various efforts that have been made by the government, there are still many residents of the Koto Panjang Ikua Koto village, precisely in the RW. 07 who do not understand this corona virus, there are also many residents who do not obey health protocols, do not use masks when leaving the house and many people who gather do not keep their distance and ignore the dangers of this corona virus on body health.

With these CSP program, students can help the community in dealing with the COVID-19 pandemic. The surrounding community is expected to maintain the health and cleanliness of the surrounding environment, so as to avoid the Covid-19 virus

2. Formulation of the Problem

The problem formulation is as follows:

- a. How to manage the activity?
- b. How to solve the social problem related to pandemic COVID-19 situation?

3. The purpose of the CSP program is assist social community how to face the pandemic condition.

4. Benefits

a. For students

- Students can collaborate and apply practical theories that they already have and how to socialize in relation to the knowledge they have learned while attending lectures at Padang State University, especially during the Covid-19 pandemic in the current New Normal era.
- As a form of implementing the Tridarma of Higher Education, namely Community Service.
- Increase knowledge and experience in society in accordance with the norms prevailing in society.
- Seek and find and take part in solving problems with scientific concepts and theories found in the midst of society, especially problems that arise due to the Covid-19 pandemic.

b. For community

- The public can gain new knowledge on how to socialize during the COVID-19 pandemic in the New era.
- Obtaining thought assistance as well as science, technology and art in carrying out the learning process in the midst of the Covid-19 New Normal Era.
- Increase public awareness to be more productive and active even in the midst of a pandemic by continuing to do activities outside the home by implementing health protocols.

B. DESCRIPTION OF ACTIVITY

1. Activities

The CSP is one of the programs that is considered to be able to develop the insight, skills, abilities and creativity of a student to enter the real world in the field. Where every student who follows this program is required to be able to develop himself to socialize and practice directly the knowledge that has been obtained from college.

This CSP was held from 23 June – 24 July 2020. located in Koto Panjang Ikua Koto Village, RW.07 Bunga Mas Housing Phase 3. Activities were carried out individually due to the covid-19 pandemic.

There are several work programs designed, as follows:

- Socialization regarding the Covid-19 pandemic to TPA/TPQ children.
- Manufacture of hand washing tools.
- Teaching general knowledge such as Indonesian, English and decorating classes at the TPA/TPQ.
- Manufacture and spraying of disinfectants.
- Helping the community to improve the economy in the midst of the Covid-19 pandemic.
- Making PPE in the form of masks.
- Ccleaning the mosque.
- Cooking demonstrations were held for mothers of mosque community

2. Capaian Setiap Kegiatan

a. Socialization Regarding the Covid-19 Pandemic to children of Quran learning school

The socialization of the COVID-19 pandemic is one of the programs that are run for children from the school of Quran study of the Darul Amal mosque. This outreach is aimed at educating children about the COVID-19 pandemic. It can be seen that minors still lack knowledge about COVID-19. When asked, the children still don't know how to protect and avoid the COVID-19 virus,

for example, The student of Quran study doesn't use personal protective equipment such as masks when going to the Quran to the mosque.

When CSP students at Padang State University gave education about covid-19, the students were very enthusiastic about listening to explanations about how to protect and avoid the covid-19 virus. Not only that, they are immediately practiced how to use a good mask and wash their hands according to health procedures.

b. Manufacture hands washer

Hand washing equipment is one of the tools used to avoid the Covid-19 virus. Manufacture of hand washing tools in the form of water filling buckets made from used paint cans, and hand soap. Hand washing tools made by students of CSP program were given to the Darul Charity mosque because there were no hand washing tools provided by the mosque. With the hand washing equipment provided by CSP students, the mosque management gave great appreciation for helping, so that the congregation of the mosque could protect and avoid the virus.

c. Teaching of Bahasa and English Language for student's Quran study

General science teaching is usually obtained in schools, but during the COVID-19 pandemic, students cannot get it directly / face to face. With the existence of CSP students at the Darul Amal mosque, it turns out that they can help students get general lessons that have not been studied for a long time.

General lessons taught such as Indonesian, English, and how to decorate the classroom. Meetings are held 8 times a month. CSP students invite Quran study participants to be able to study even during the COVID-19 pandemic, so they don't forget general lessons. During the learning process, the participants were very enthusiastic about learning and participating in the learning process.

d. Manufacturing and disinfectant spraying

Disinfectant is a liquid used to kill viruses. Making disinfectants is very easy and the materials used can be found anywhere. Spraying of disinfectant in the Bunga Mas residence is very rare, due to the remote area. Therefore, the CSP program students sprayed around the residence and the surrounding mosque. Spraying is useful for cleaning viruses that are spread around the community. Residence community are grateful to CSP students, because spraying disinfectant liquid makes the residents' environment safer from the covid-19 virus.

e. Supporting the community to increase the economic life while pandemic situation

The COVID-19 pandemic has had a major impact on the economy. One of them is the number of people who are unemployed and have lost their jobs, so there is no income to meet their daily needs. With these problems, CSP students conducted economic socialization for several mothers who had lost their jobs. One of them is women who tailor clothes, who usually get orders per day, during the pandemic they only get orders once a week. Regarding this problem, CSP students gave suggestions for the mother to make masks during the pandemic, so that her could generate the income. So as, tailor housewives accept the advice given and try to run it during the covid-19 pandemic.

f. Masker manufacturing

Personal Protective Equipment (PPE) is a tool that is used to avoid the Covid-19 virus, one of which is a mask. Masks are very useful in daily activities, because the covid-19 virus spreads through saliva, touch and so on. When we wear masks, the virus will be inhibited from spreading. In the PPE manufacturing program in the form of masks, CSP students directly buy materials, tools and the sewing process directly.

Judging from the location of the CSP program, many people do not comply with government regulations to use masks, so CSP students are moved to make masks and distribute them to the community. For example, in the Bunga Mas residence, there are still many children playing without wearing masks, so we distribute them to those in need. That way, the mask-making program goes well with the support of the surrounding community.

g. Mosque cleaning

Cleaning the mosque is one of the programs provided by the Quran study management to CSP students. With this mutual cooperation, students can interact directly with the community. Mutual cooperation is carried out such as cleaning the mosque, cleaning the mosque garden, and spraying disinfectants inside and outside the mosque. In this program, students get a direct response from the RW, RT, mosque administrators and the surrounding community, they feel helped by the existence of CSP students.

h. Cooking Demo Conducted for housewives of Majlis Taqlim

The cooking demonstration is a work program requested by the taqlim majlis housewives. With the cooking demonstration, they were very excited to take part in the event made by CSP students. In the cooking demonstration, CSP students gave tips and tricks on how to maintain a healthy diet during the COVID-19 pandemic, with a good diet to help maintain the body's immune system during the COVID-19 pandemic. The women were very enthusiastic about the program run by CSP students, so the cooking demonstration work program ran smoothly.

3. Obstacles encountered

The implementation of KKN activities in general went well, but there were several obstacles that made the activities run less than optimally in implementing the planned programs, such as:

- a. Lack of funding for work programs, resulting in less than optimal activities being carried out.
- b. The community does not participate in work programs carried out by CSP students, due to the current pandemic conditions.
- c. The lack of time given by the head of the Quran study school when socializing Covid-19, so that it was not optimal in delivering material.
- d. Lack of public awareness about the importance of using PPE in the form of masks.
- e. The lack of tools available when carrying out the cooking demo work program, so the event was not conducive.

4. Solution

Of the obstacles faced by CSP students, there are several solutions provided, such as socializing about Covid-19 to people who are less concerned, providing hand washing equipment for mosques, making and distributing masks for the community, and preparing CSP students to face obstacles that will occur.

C. CONCLUSION AND SUGGESTION

Conclusion

The Community Service Program (CSP) is one of the programs that is considered to be able to develop the insight, skills, abilities and creativity of a student to enter the real world in the field. There are several work programs carried out by CSP students in the sub-district of Panjang Ikua Koto, such as spraying disinfectants around residents' homes, roads, and public places, distributing masks, making hand washing equipment, teaching at the Quran study, strengthening the community's economy, mutual cooperation in mosques, and distributing pamphlet related to how to prevent the corona virus in people's homes. With the existence of CSP students, it is hoped that they can help the government in dealing with the COVID-19 pandemic.

Suggestion

It is hoped that the work programs that have been carried out can be developed and run by the community, and readers can provide references as examples of CSP reports.
